ASSET MANAGEMENT SYSTEM

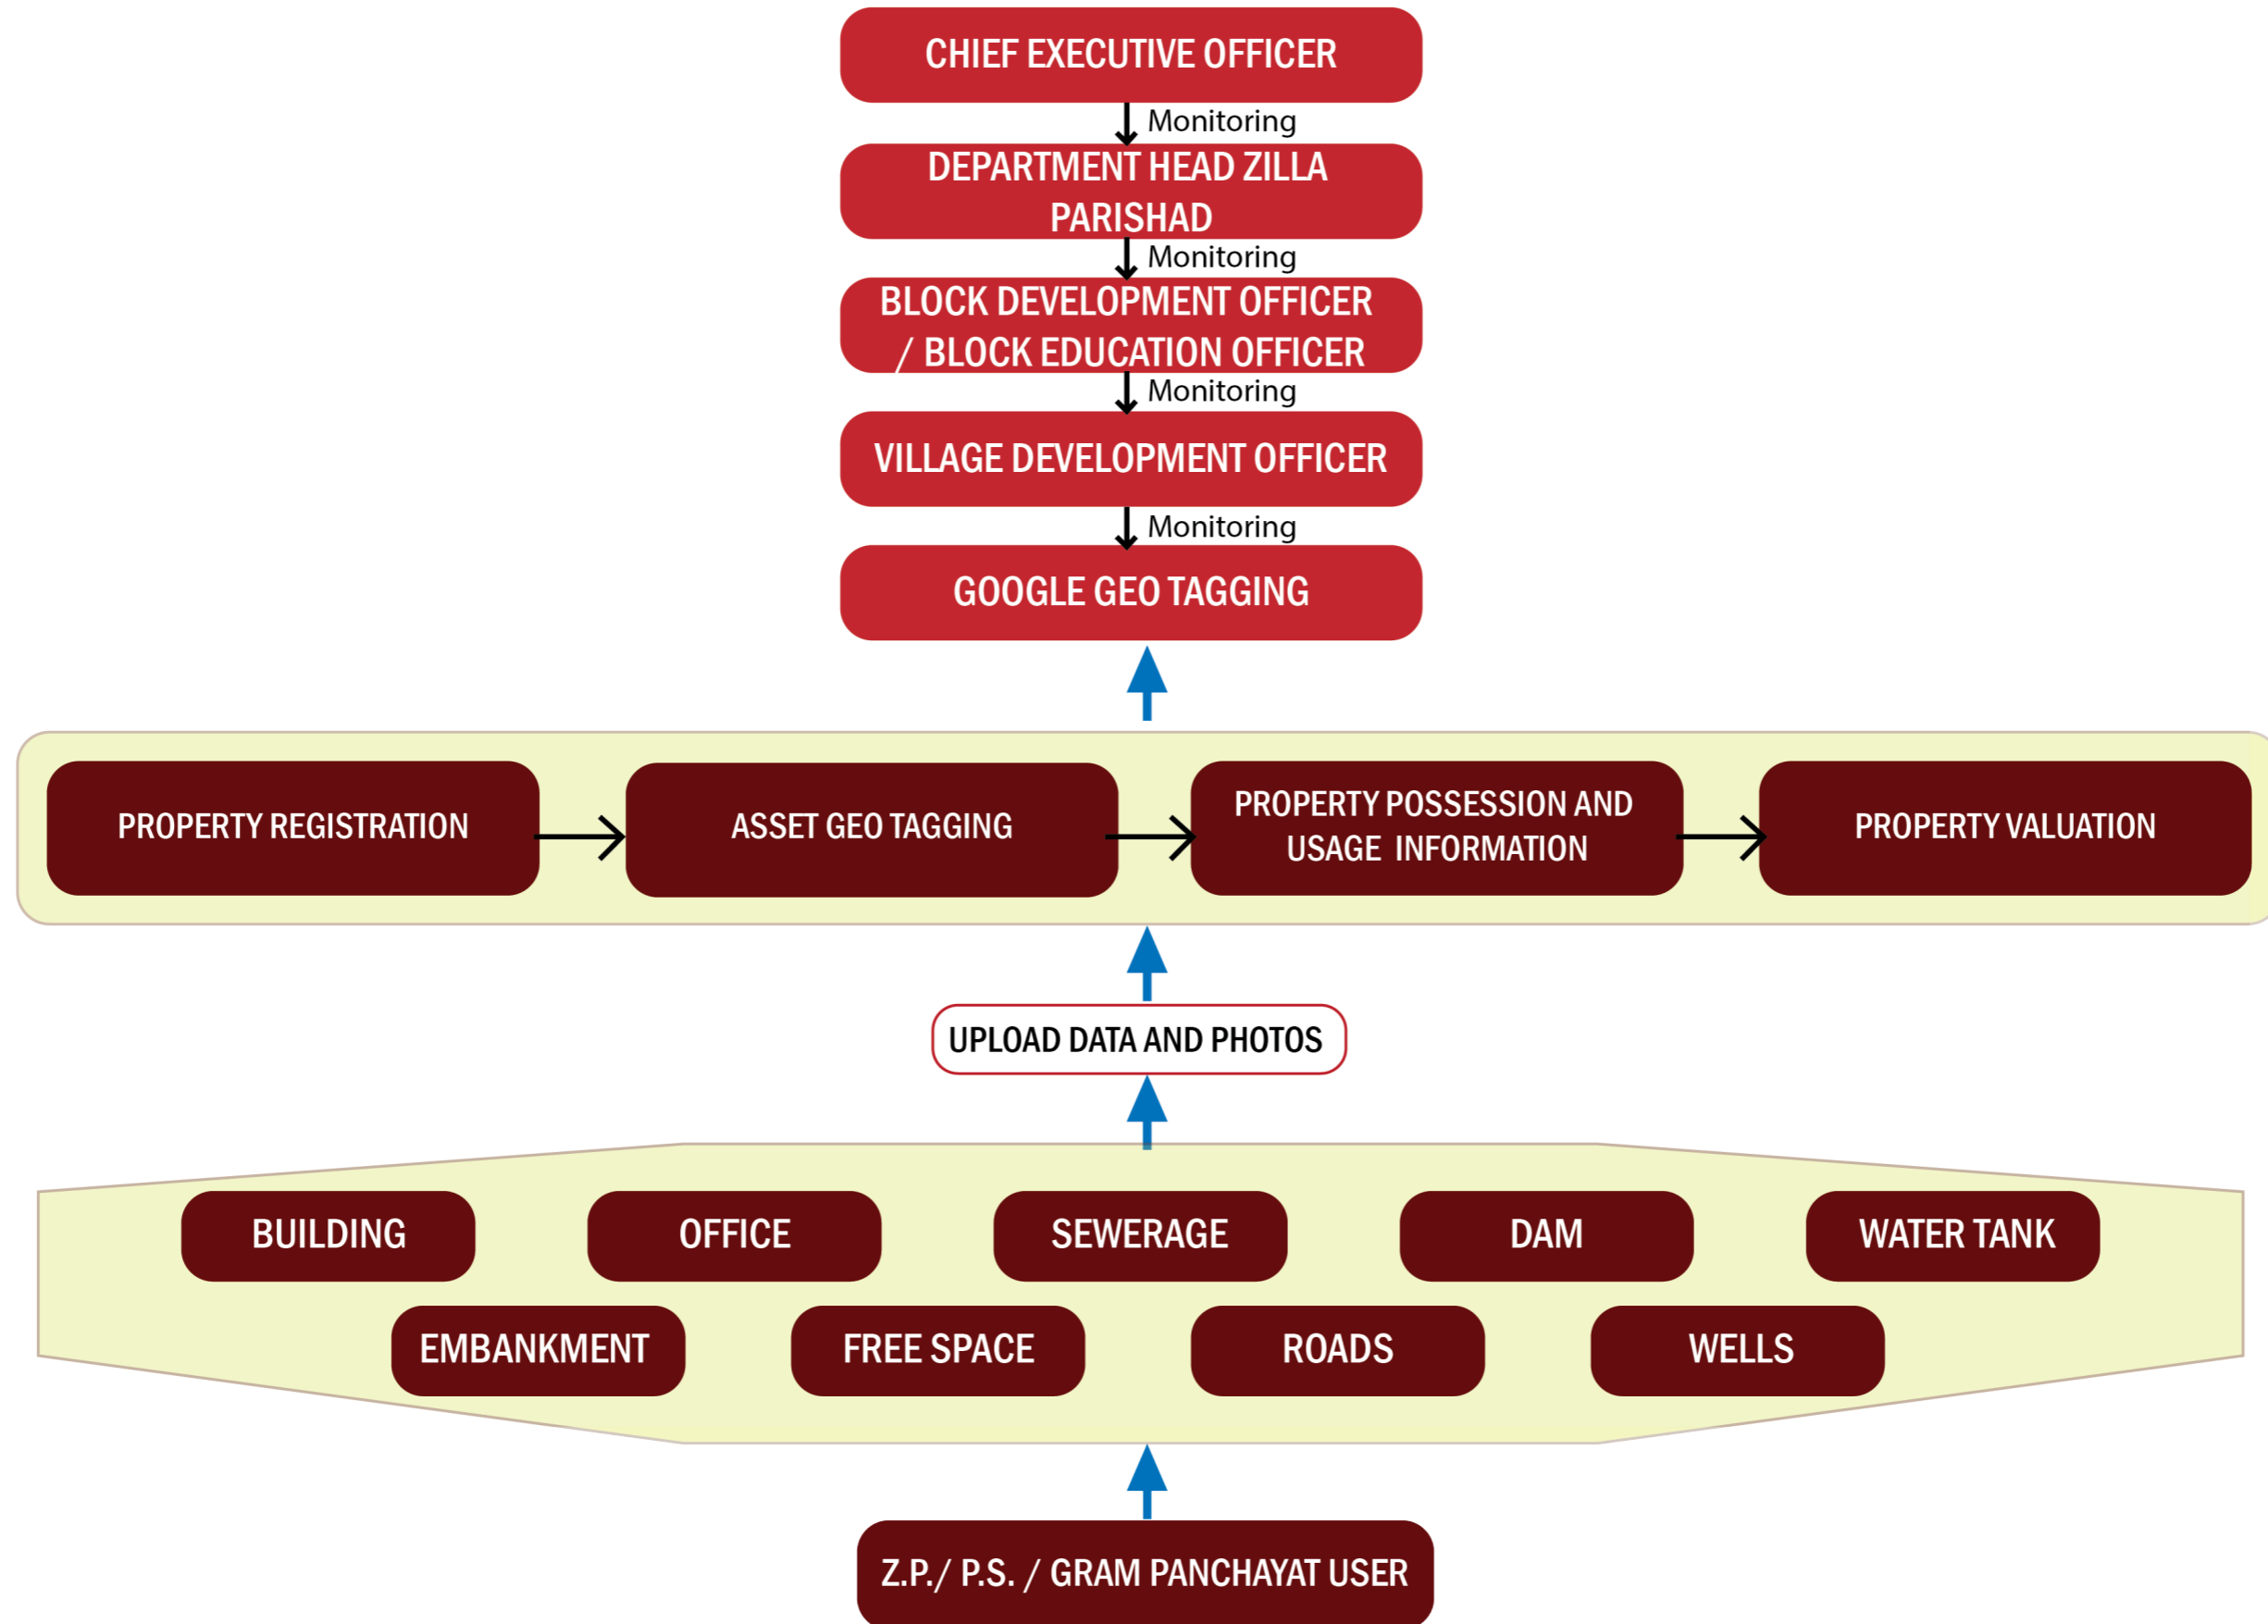

Web and Mobile Based

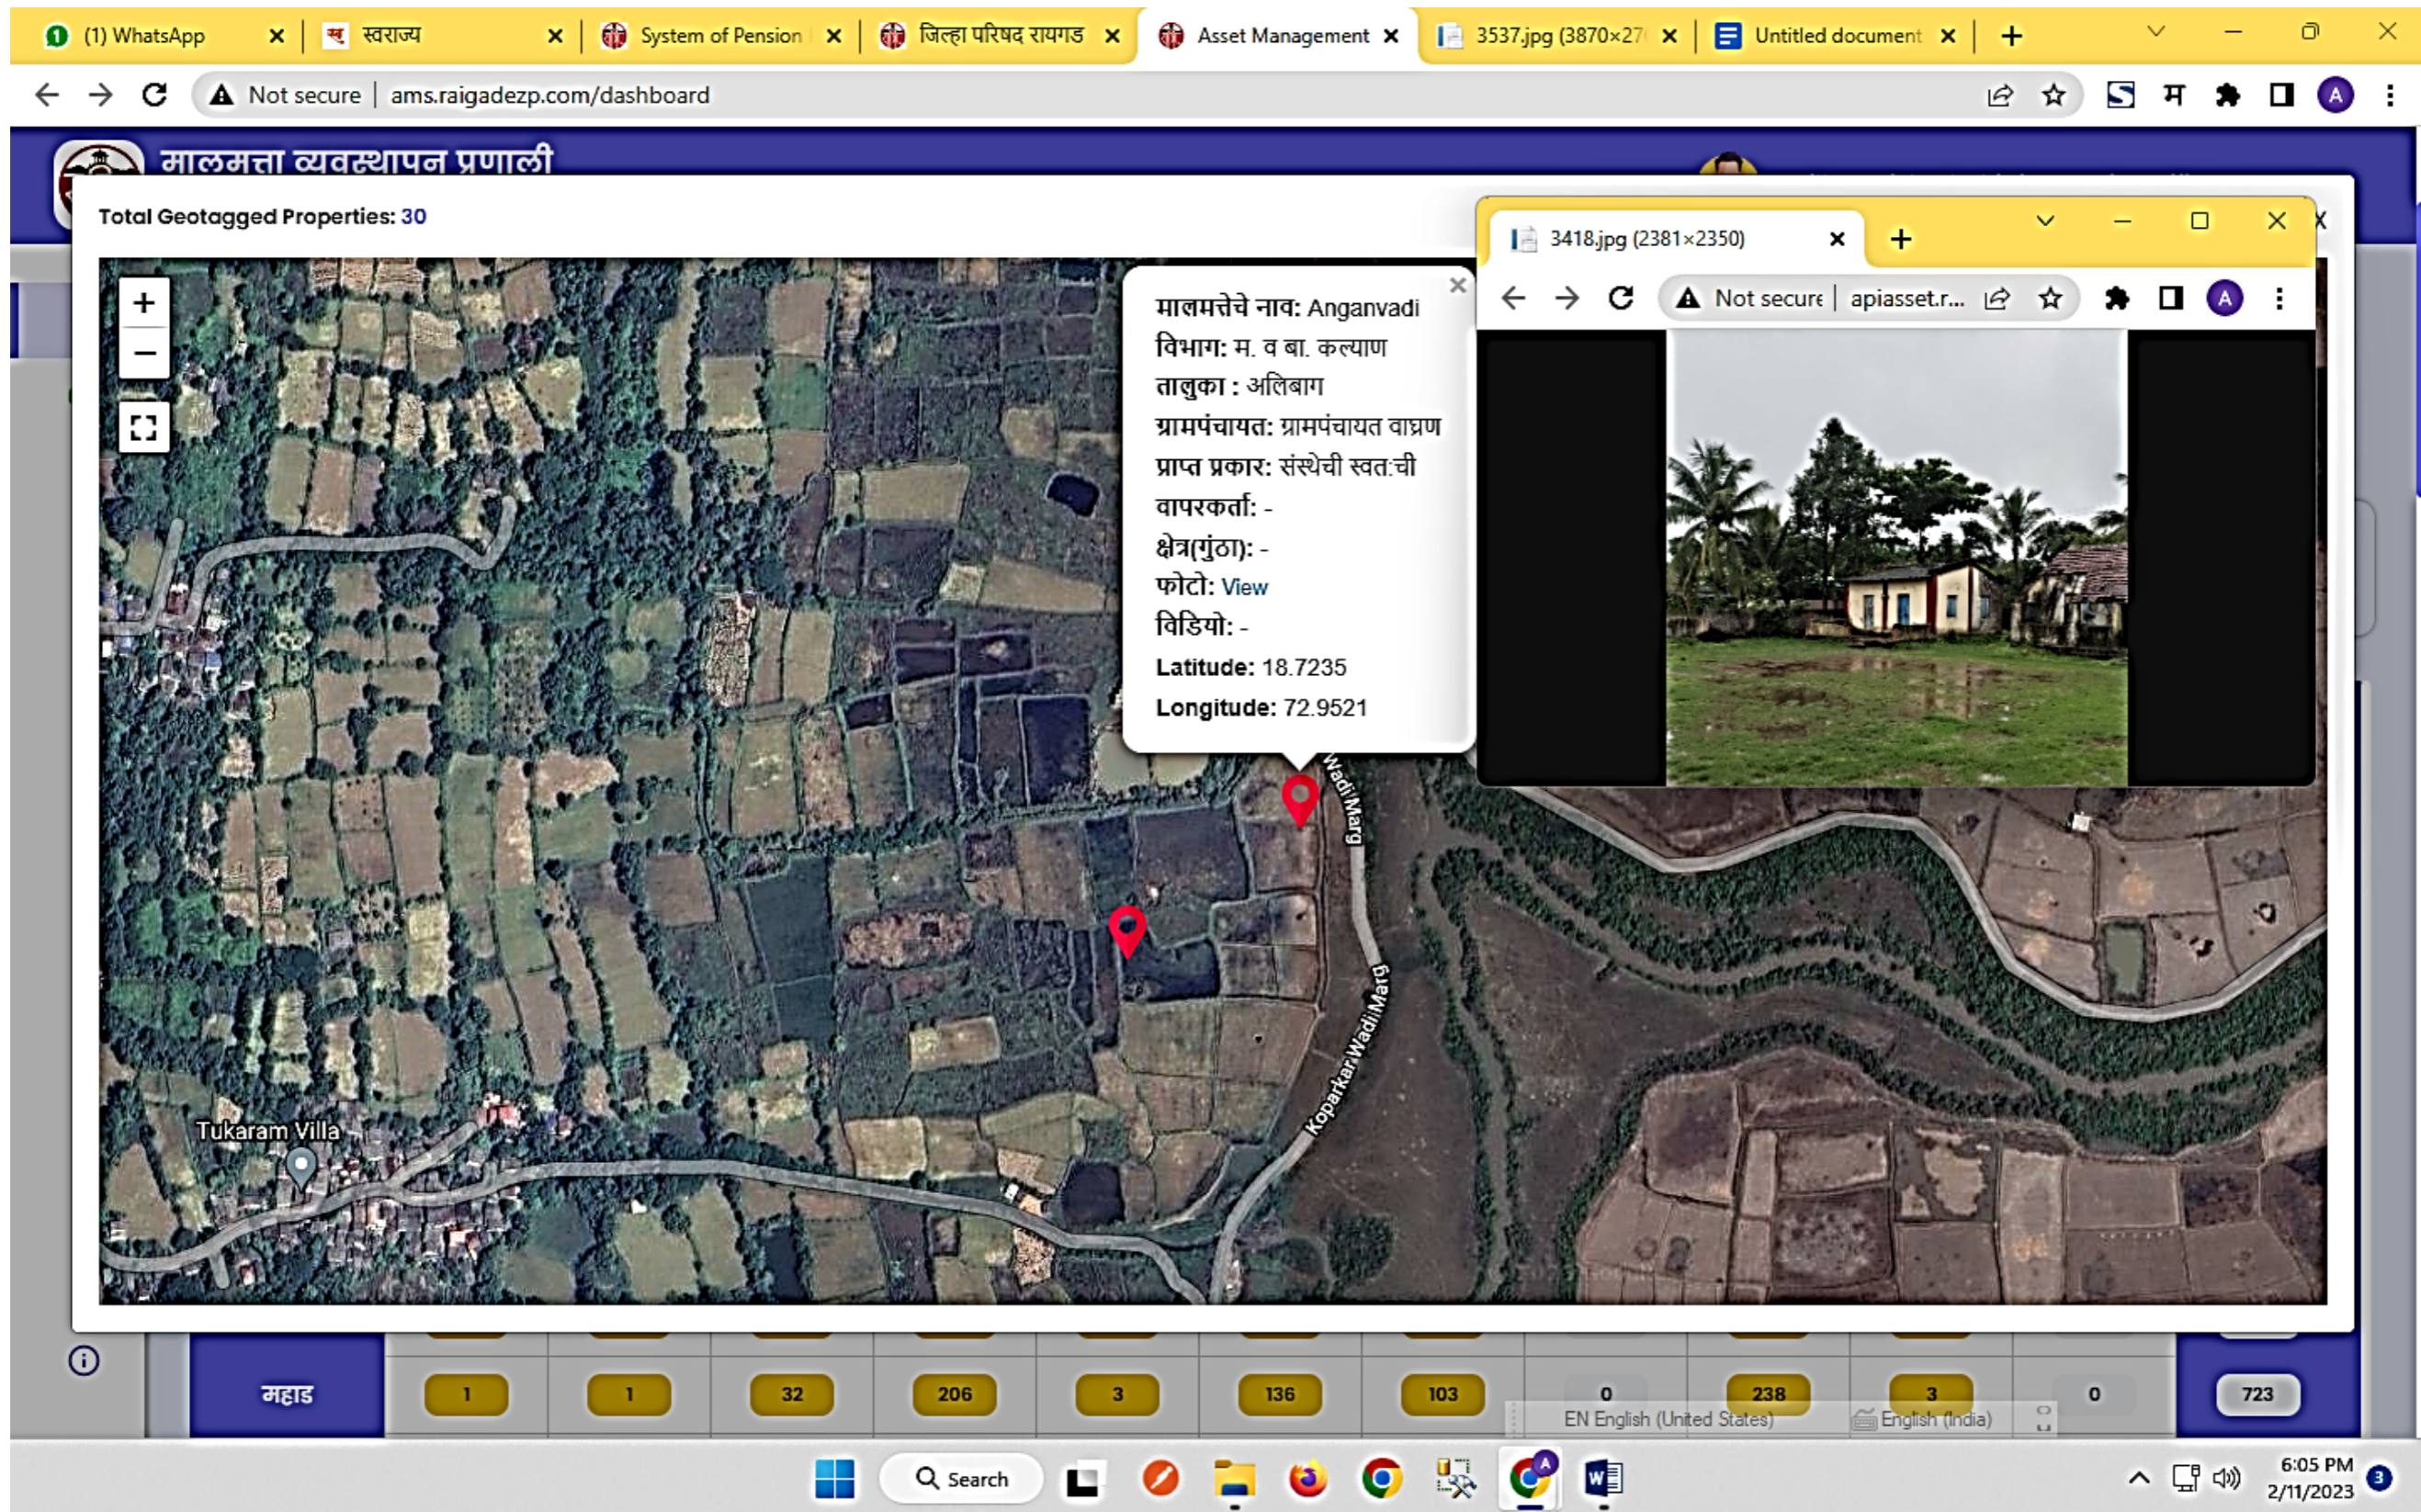

System Features

A comprehensive computer system developed with web and mobile user interface for maintaining property inventory with geo-location at the village level within the District, Panchayat Samiti, and Gram Panchayat.

- ➔ **Android-Based Mobile App:** Mobile application provided for uploading photos and videos related to property with geo-location on Google map.
- ➔ **Geolocation Integration:** The mobile app captures location data using property latitude-longitude location and displays property locations on Google Maps.
- ➔ **Dashboard:** The District, Panchayat Samiti, and Gram Panchayat entities have access to a centralized dashboard that aggregates all property-related information.
- ➔ **Property Categorization:** The system categorizes property based on their respective departments.
- ➔ **Property Classification:** Property classification is performed based on property rights, property type, and further subcategorized based on property characteristics.
- ➔ **Property Valuation:** The system facilitates property valuation using current year data, market rates, and Ready Reckoner values.
- ➔ **Document Management:** : All property-related documents can be securely uploaded and stored within the system for reliable data retention.
